

PREPARING FOR A SUCCESSFUL IMPLEMENTATION

We're excited you're considering Anaconda Team Edition to help secure and manage your data science and machine learning life cycle. Your success means our success. We've created this list to help ensure a smooth implementation and accelerate your time to value from your investment.

These are the essential IT requirements and suggested actions you should take to help ensure your data science team gets to work on projects as quickly as possible.

1 TECHNOLOGY READINESS

Please ensure the following minimum requirements are met:

- A Host Linux operating system that can run the installer binary
- Docker running on the host
- Docker Compose installed and available on the command line
- 4 CPUs
- 8GB RAM
- 500GB storage space

2 STAKEHOLDER READINESS

- Introduce Anaconda Team Edition to IT and data science stakeholders
- Document your environment and technical requirements as needed

3 KICK-OFF!
