

Air-Gapped Environments Kickstart

Keep Your Software Current—Even in Air-Gapped Environments

Many organizations rely on applications that must operate without internet access, whether for security, privacy, or operational reasons. However, keeping airgapped systems up to date is essential to address security vulnerabilities, fix bugs, and incorporate new features—especially in fast-evolving fields like AI, ML, and open-source software. How do you maintain security and operational independence while ensuring regular updates?

Streamlined, Secure Updates for Airgapped Systems

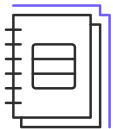

Our Air-Gapped Environments Kickstart helps you establish a secure, automated process to integrate open-source updates into your airgapped environment. Our experienced engineers will work closely with your team to:

- Align your software supply chain with your security policies and security posture
- Enable controlled, auditable updates on a schedule that meets your needs
- Provide full visibility into changes while reducing risk and manual effort
- Leverage the latest open-source innovations without long delays
- Provide the agility required to easily update packages and quickly address security vulnerabilities

In approximately **100 billable hours**, we will deliver a tailored solution to automate package retrieval and updates, customized to your organization's security requirements.

Prerequisites

To qualify for this Kickstart project, you must provide the following:

License for the Anaconda product to be integrated

Technical personnel familiar with your organization's airgap transfer requirements

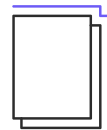

A point of contact with the team responsible for shipping software to the air gapped environment

Deliverables

A secure, automated process to retrieve and manage open-source package updates

A final report documenting the intake process and best practices for managing your airgapped environment

A live Q&A session to review the results and address any questions
