Anaconda Professional Services
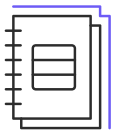

Python Migration Kickstart

Let us help you switch to Python!

Now that Python is the most popular programming language in the world, are you feeling left out? Our highly experienced engineers will help you switch your SAS, Spark, Matlab, or R workflows into modern high-performance, flexible, AI-ready Python tools, using open-source libraries that can become an integral part of all your future workflows.

Just give us some runnable code for your data-processing workflows of interest in a supported language, and we will provide examples of high-performance, well structured Python that can act as a guide for building up successful usage of Python in your organization. In approximately **100 billable hours**, we deliver open-source Python ready to build your data science and AI future.

Requirements
To qualify for this Kickstart project, you must provide the following:

Notebooks, scripts, or other examples of how you currently work with your data

Sample data used in the analyses (obfuscated if necessary)

Migrate your workflows to Python with a set of three deliverables:

Notebooks or dashboard apps for interacting with your data

Final report with documentation for usage and future development

Benchmarking code demonstrating any performance improvements obtained
